

CSV FILE AND PANDAS REPORT

What is a CSV File?

CSV (Comma Separated Values) is a file format used to store tabular data such as tables or spreadsheets. Each line represents a row and values are separated by commas. It is widely used for data exchange because it is simple and supported by many applications.

Handling CSV Files in Python:

CSV files can be handled easily using the Pandas library. Pandas provides functions to read, write and manipulate data efficiently.

Example:

- `read_csv()` → Used to read CSV file
- `to_csv()` → Used to write data into CSV file

Pandas Features and Methods:

- `DataFrame` → Main data structure in Pandas
- `head()` → Shows first 5 rows
- `tail()` → Shows last 5 rows
- `info()` → Displays summary of data
- `describe()` → Statistical summary
- `shape` → Returns number of rows and columns
- `columns` → Returns column names
- `filtering` → Select data using conditions

CSV Data
